

Important enhancements to DocPath's Document Output Management software

Significant improvements to DocPath OutputDynamics, the company's main Document Output Management software solution for increased performance

SUWANEE, GA, UNITED STATES, November 24, 2016 /EINPresswire.com/ -- DocPath continues to build on the proven reliability and performance levels of its [DocPath OutputDynamics](#) document software solution with a number of enhancements designed to provide DocPath Clients with flexible document software solutions which evolve with their changing business needs.

A Comprehensive Document Output Management Solution

DocPath OutputDynamics is a complete document output software solution, specifically developed for high-speed generation and distribution of documents, as well as automatic pre- and post-processing. The main features of this Document Output Solution include advanced integration capabilities with existing hardware, which enable any type of organization to adequately align document processes with business requirements without any additional costs. Companies can also easily add external programs to the DocPath OutputDynamics process flow, expanding the array of available pre- and post-processes that may be applied to both input and output.

“

a flexible and robust document output software product that seamlessly adapts to both current and future business needs”

*Julio Olivares - DocPath
President*

Guaranteed Business Continuity

The latest improvements added to the DocPath OutputDynamics document output solution are aimed at offering DocPath Clients a flexible and robust document output software product that seamlessly adapts to both current and future business needs. As such, the centralized dashboard, compatible with any browser, has been enhanced in order to offer users a better and more straightforward user experience. Among other modifications to the online interface, creating new document output generation tasks is now much easier, as the different steps are clearly differentiated and multi-language messages guide the user through the process. In addition, the log section includes more message types and users can manually stop running tasks whenever necessary.

With regard to the latest OutputDynamics features that broaden the range of available pre- and post-processes, a set of new DocPath document software modules have been added recently, which includes a new application that allows users to sort generated files according to different criteria and a program which generates an intermediate file format to be used in more complex generation processes.

Also new in DocPath OutputDynamics are a large number of additional features added to the majority of the already existing DocPath document software modules. For example, the file merger module now supports a large number of new file formats and the internal processes related to data indexation and deletion, deploy and user authentication have been considerably optimized.

This latest release of DocPath OutputDynamics delivers an impressive set of document output enhancements that responds to the increasing market demand of a comprehensive document software for management, generation, printing and distribution of high volumes of documents.

About DocPath
