## About Wind Turbine Nacelle

A nacelle is a cover that houses wind turbine components such as gearbox, generator, shaft, and other components. With increasing size of turbine, the cover size of the nacelle has also increased, leading to transportation issues including costs. Typically, nacelles are heavy in weight. This is needed to protect the turbine components from high wind speeds and extreme weather conditions. Innovations in nacelle designs include lightweight, easy to transport, and cost-effective nacelle manufacturing.

Technavio's analysts forecast the global wind turbine nacelle market to grow at a CAGR of 6.72% during the period 2017-2021.
