[Pharmaceutical Packaging Market 2017](#)

Pharmaceutical packaging products are used to protect pharmaceuticals so that they remain unscathed by any external toxins and microbial activity, and thus, have an extended shelf life. Drug manufacturers have to abide by international compliance jurisdictions enforced by the regulatory authorities, which ensure packaging is a critical element in the drug delivery process to the final point of purchase. Various raw materials such as plastic resins, glass, paper and paperboard, aluminum, and other metals are used for the construction of pharmaceutical packaging materials. These packages are available in a broad range of products, such as bottles, parenteral containers, blister packs, caps, closures, pre-fillable syringes, and tubes.

The analysts forecast the Global Pharmaceutical Packaging market to grow at a CAGR of 5.90 percent over the period 2015-2019.
