About [HEMS](#)

A HEMS allows homeowners to monitor and reduce the energy consumption of electrical and electronic devices at home and hence to conserve energy. With HEMS, energy consumption can easily be monitored by using cellphones, tablets, or other communicating devices. It can also help in power management by tracking real-time energy consumption and comparing it with the historical data of many electronic devices. HEMS helps in improving the communication between communications devices and consumer. HEMS includes five products that are used to manage and reduce the consumption of energy of a home: lighting controls, self-monitoring systems and services, programmable communicating thermostats, intelligent HVAC controllers, and advanced central controllers.

Technavio's analysts forecast the global HEMS market to grow at a CAGR of 26.8% over the period 2014-2019.
