

USPS eVS Electronic Postal Manifesting Added to Multi-Carrier Shipping Software

FORT MYERS, FL, USA, September 12, 2013

/EINPresswire.com/ -- [Harvey Software](#), Inc. announced that its best-selling multiple carrier [shipping software](#), [CPSLogic](#), now provides electronic manifesting for USPS package shipping using the Electronic Verification System (eVS).

Today, Harvey Software, Inc. announced that its best-selling multiple carrier shipping software, CPSLogic™, now provides electronic manifesting for US Postal Service package shipping using the Electronic Verification System (eVS). USPS eVS allows high-volume package shippers and package consolidators to document and pay postage using electronic manifest files, which are then transmitted over the Internet to a Postal Service™

database. eVS is designed to make post office shipping easy for high-volume package shippers.

"eVS mirrors our paper manifest process, but does so electronically, so this is a great step forward for shippers using CPSLogic, as well as a great addition to our product offerings," stated Bert Hamilton, President and CEO of Harvey Software, Inc. "Shippers benefit greatly since eVS is a much simpler process in so many ways, compared to our former paper manifest for USPS shipping," said Mr. Hamilton. "The initial setup and approval process is quicker, the reconciling of shipments by the Post Office occurs monthly instead of daily and submitting packages for delivery has fewer time constraints. And, a huge bonus is that paperwork is eliminated because electronic data transmissions replace hardcopy manifests, postage statements and adjustment worksheets, with postage easily paid via an electronic deduction from the shipper's postage payment account," explained Mr. Hamilton. "Shipping with eVS can be added to any CPSLogic shipping software program, so shippers can now take advantage of both of the best and easiest ways to ship with the USPS – choosing from either eVS or shipping with Internet postage," stated Mr. Hamilton. "It takes a higher volume of shipping to qualify for eVS, so we are happy to be able to provide Post Office shippers both of the best methods to ship as they need it. Since the Post Office imposes no additional cost to ship to residential addresses, companies, especially B-to-C businesses, now see an easy way to use Post Office services that are more and more important to their shipping operation and bottom line." concluded Mr. Hamilton.

Harvey Software's CPSLogic Shipping Software Now Supports USPS eVS

USPS eVS support adds another great option for high volume shippers using CPSLogic. For a complete listing of all that is supported when you add USPS eVS to your CPSLogic shipping software visit <http://www.PostalShippingSoftware.com/>.
