

Ethanol: Consumption, Demand, Sales, Competitor and Forecast 2016 – 2021

Ethanol Global Market 2016 Analysis and Forecast to 2021

PUNE, INDIA, October 18, 2016

/EINPresswire.com/ -- [Ethanol](#), also known as ethyl alcohol or grain alcohol, is a colorless liquid produced by fermenting carbohydrates found in a number of different types of grains, such as corn, wheat and sorghum, and other cellulosic matter found in plants. Most of the ethanol produced in the United States is made from corn because it contains large quantities of carbohydrates that convert into glucose more easily than most other kinds of biomass, can be handled efficiently and is in greater supply than other grains. One bushel, or 56 pounds, of corn, produces approximately 2.8 gallons of ethanol, 16.5 pounds of distiller grains and 0.6 pounds of corn oil. Outside of the United States, sugarcane is the primary feedstock used in ethanol production.
