[Matting Agents Market 2017](#)

Matting agents minimize the gloss of polished surfaces or clear coating films. These are used as additives, which rapidly reduce the gloss of transparent coatings either by the formation of structural surface irregularities that scatters light or by making the material surface less transparent. Matting agents are manufactured from sulfuric acid and sodium silicate. Matting agents are used widely in various coating applications. They are classified into two categories: organic and inorganic.

The analysts forecast the global matting agents market to grow at a CAGR of 5.11% during the period 2017-2021.
