About [AMI](#)

An AMI refers to an infrastructure ranging from smart meters to two-way communication networks through various communication and data processing channels. It comprises of all the applications that permit the assembly and flow of energy usage on real-time basis. It makes two-way communications with clients possible. It is considered as the backbone of the smart grid because all the operations taking place in metering and load flow are regulated through an AMI. The main functions of an AMI include remote meter reading for error-free data, identifying energy system problem, load outlining, energy inspection, and reduction of load during shedding.

Technavio's analysts forecast the global advanced metering infrastructure market to grow at a CAGR of 9.0% over the period 2014-2019.
