PUNE, INDIA, February 15, 2018 /EINPresswire.com/ --

WiseGuyReports.Com Publish a New Market Research Report On –“ Soldering Robot 2018 Market Segmentation, Application, Technology & Market Analysis Research Report to 2023”.

Description:

[Soldering robot is](#) a machine to finish Soldering. Soldering is a process in which two or more items (usually metal) are joined together by melting and putting a filler metal (solder) into the joint, the filler metal having a lower melting point than the adjoining metal. Soldering differs from welding in that soldering does not involve melting the work pieces. In brazing, the filler metal melts at a higher temperature, but the work piece metal does not melt. In the past, nearly all solders contained lead, but environmental and health concerns have increasingly dictated use of lead-free alloys for electronics and plumbing purposes.
