## Description

Wiseguyreports.Com Adds "Baby Food & Drink -Market Demand, Growth, Opportunities and Analysis Of Top Key Player Forecast To 2024" To Its Research Database

Baby food is any soft, easily consumed food, other than breastmilk or infant formula, which is made specifically for babies. The food comes in multiple varieties and tastes. Most infant formula is made with cow's milk, but it has been modified and supplemented with additional nutrients. As a result, the formula is more nutritious and easier for the baby to digest than cow's milk. Other formula options include soy-based formulas and hypoallergenic (or protein hydrolysate and amino acid-based) formulas.

Increasing incidences of malnutrition among children has spurred the global demand for nutritional baby foods. The overall food and beverage industry has witnessed a steady rise in the production of baby foods over the past few years. Parents with traditional approach towards providing nutrition to their babies are shifting to baby foods.

However, companies producing baby foods are being strictly regulated by global bodies that check the quality of these products. Moreover, with developments in production of baby foods, companies are facing challenges in remaining cost-effective.
