PUNE, MAHARASHTRA, INDIA, October 4, 2019 /EINPresswire.com/ -- [Global Insect Pest Control market 2019-2025](#)

Insect pest control is the regulation or management of a species defined as a pest, a member of the animal kingdom that impacts adversely on human activities. The human response depends on the importance of the damage done, and will range from tolerance, through deterrence and management, to attempts to completely eradicate the pest. Pest control measures may be performed as part of an integrated pest management strategy. The chemical control method was largely used for insect pest control in 2017 due to the significant demand for pyrethroids for its limited application rate and compatibility against a variety of insects. Termite control, on the basis of insect type, accounted for the largest share in 2017 owing to its higher demand in industrial and residential sectors for pre- & post-construction treatment and wooden house treatment, respectively.

The global Insect Pest Control market was valued at xx million US\$ in 2018 and will reach xx million US\$ by the end of 2025, growing at a CAGR of xx% during 2019-2025.
