rate, market share, competition

landscape and the market status of the

global vitamins market are comprehensively studied in the report. By identifying the various sub-segments of the global vitamins market the structure can be understood. Competitive developments in the market are studied and are included in the report.

Organic substances that are required in small quantities in order for normal growth and health in advanced animal life are called vitamins. They vary from other important biological compounds like lipids, carbohydrates, and proteins in one very important way. Vitamins cannot be synthesized in sufficient quantities by the body when compared to the above and must be obtained by any synthetic source or by the diet followed by the person. They are hence also known as essential nutrients and are required in comparatively small quantities by the body.

There are thirteen vitamins that are currently known and they can be either water-soluble or fat-soluble. Vitamins that are fat-soluble are easier to store in the body than water-soluble vitamins. Vitamins are called organic as they always contain some amount of carbon. Depending on the person taking doses, vitamins can be ingested naturally in different foodstuffs or they may be consumed as supplements. Water-soluble vitamins can not be stored in the body and are ejected in the form of urine.

Key Players:

DSM

Lonza

CSPC

BASF

Zhejiang Medicine
