

# Flexible and Transparent Displays Market Size, Trend, Segmentation, Growth And Opportunities Forecast To 2025

---

*This report covers market characteristics, size and growth, segmentation, regional breakdowns, competitive landscape, market shares, trends and strategies*

PUNE, INDIA, November 7, 2019 /EINPresswire.com/ -- Overview

As the name suggests, a flexible and transparent display is a virtual, electronic display that is flexible. Technology has come a long way from big chunky phones and sleek, thin devices to the next step in innovation. The transparent and flexible displays are very convenient to carry and do not occupy much space, if any, at all.

Flexible and transparent displays are useful in many sectors, like education and healthcare, automobiles, etc. The new age dependence on technology has induced companies to develop and achieve great strides in development.

The following manufacturers are covered:

Samsung  
LG  
AU Optronics  
Sony  
Toshiba  
HPE  
Kent Displays  
Fujitsu  
Corning  
Sharp  
Panasonic  
Toppan Printing  
Mitsubishi Electric  
Epson  
NanoLumens  
Plastic Logic  
NEC Displays Solutions  
Philips  
Universal Display  
E Ink

Segmentation

Transparent displays give an interactive aspect to information on a transparent glass surface. Adding the element of flexibility enhances the user experience. As transparent displays attract

the consumer's attention, shopping centers worldwide are adapting this concept into their marketing strategy. Flexible and transparent displays have gained traction in end consumers who prefer devices that have a very user-friendly interface.

By type, flexible and transparent displays can be divided into two – Organic Light-Emitting Diode (OLED) and Liquid Crystal Display (LCD). OLED offers consumers with vibrant colors, high contrast, deep blacks, wide viewing angle, and low power consumption. The plastic layers of OLED provide more flexibility compared to LCD. LCD uses the light-adjusting properties of liquid crystals for its operation. While both OLEDs and LCDs have their advantages and disadvantages, it is up to the end consumer to decide which one they would prefer.

By application, the flexible and transparent display market is most prevalent in defense, automotive, education, retail, and consumer electronics industry. Heads-up displays in luxury and high-end cars, and education sector hailing for more interactive options to help students be more active in classes has helped in the growth of this market. Another popular trend of wearing smartwatches, glasses, and other wrist bands has helped to bring the displays market up a notch.

## Regional Analysis

An in-depth report on flexible and transparent display reveals the global distribution of this market. While this report gives a detailed look into the market operations in North America, Europe, China, Japan, Southeast Asia, and India, it also mentions the less dense countries too. The report takes a look into how the flexible and transparent display is faring in the current economic climate by comparing it with the historical data available. This, in turn, has been utilized to map out how the future prospects will look.

## Industry

The industry-specific focus of the report goes in detail into each significant player in the sector of the flexible and transparent display. The manufacturers are categorized based on their production, apparent consumption, export and, import of the screens. The study also has a deeper focus on the manufacturing sites, capacity and production each manufacturer is capable of. The price point, revenue, and market share of each manufacturer are given in detail to help investors to make decisions regarding their current investments and for the future.
