Opened in September 2024, Hospital Azar was initially designed for bariatric and cosmetic care and has since expanded to offer gynecology and soon, orthopedic services. In its first year, the hospital has hosted over 3,000 successful surgeries, expanding its expertise beyond traditional weight loss procedures. In total, MBC has helped close to 30,000 patients transform their lives worldwide.

The facility has added new, advanced bariatric options to its comprehensive surgery packages, such as the Single Anastomosis Sleeve Ileal Bypass (SASI-S). Additionally, MBC performed its first endometriosis surgery in 2025, marking a significant step toward expanding access to specialized women's healthcare in Tijuana, Mexico.

The center continues to deliver life-changing outcomes for patients with complex and revision cases, including a successful procedure on a patient with a BMI of 110.
