

The Era of “Full-Chain Solo Creation” Begins: iMini AI Launches E-commerce Feature Page to Empower Online Sellers

iMini AI redefines e-commerce content creation efficiency and sets a new benchmark for intelligent digital commerce.

NY, UNITED STATES, November 5, 2025 /EINPresswire.com/ -- As global [e-commerce](#) enters its busiest season with Black Friday colliding, [iMini AI](#) has officially launched its E-commerce Feature Page — a one-stop creative platform built to help online sellers generate visual content faster, smarter, and at scale.

With global e-commerce transaction volume surpassing \$10 trillion and China’s online traffic cost rising 35% compared to five years ago, digital merchants face unprecedented production pressure. The new iMini AI E-commerce Suite directly addresses this challenge by integrating AI generation, intelligent editing, and dynamic video expansion into a single streamlined pipeline.

With iMini AI, merchants can complete main product images in 3 minutes, and marketing videos in 5 minutes, reducing content production costs by up to 70% and gaining a crucial speed advantage during peak sales periods.

Three Core Modules Redefining Content Creation

The new iMini AI E-commerce Page focuses on end-to-end visual production through three powerful components that enable “single-person full-chain creation.”

1. Intelligent Image Generation System

Powered by the Nano Banana model, iMini AI's system supports one-click generation of lifelike product or model images. It automatically performs background cleanup, lighting enhancement, and skin texture optimization.

Three built-in e-commerce templates — white-background main images, detail shots, and lifestyle scenes — help merchants quickly adapt product visuals for different marketing contexts.

For example, when a merchant uploads a fashion reference image, iMini AI can match body shape and garment texture precisely, generating scene-consistent visuals that integrate seamlessly with branded layouts.

2. Multi-Style Derivation Engine

With iMini AI, one photo session becomes endlessly reusable. The same model set can be instantly transformed into streetwear, business, or vacation looks. Merchants can also auto-generate lip close-ups, shoe detail shots, or apply global color edits across all linked materials with a single adjustment.

In a lipstick campaign case, iMini AI accurately matches lip tone to product texture with a 98% color accuracy rate, improving brand consistency and saving up to 80% of editing time.

3. Dynamic Video Creation Platform

Beyond static visuals, iMini AI supports full product animation generation. Integrated with Google VEO 3.1 and Tongyi Wan 2.2, the system can auto-fill frames between the first and last image to create cinematic, smooth 3D rotation or product reveal clips.

Sellers can use built-in scripts such as “360° rotation” or “function showcase”, or simply type their own storyline — the AI will handle transitions, sound design, and effects automatically, producing ready-to-post promotional videos.

Multi-Modal Intelligence: Setting a New Standard for AI E-commerce

iMini AI is built around a multi-modal content production philosophy, combining leading large models like GPT-5 and Grok 4 into a unified “brain + limbs” intelligent architecture — going beyond traditional single-function AI tools.

This architecture offers two major advantages for e-commerce creators:

- Full-Chain Coverage: From image generation and copywriting to video editing, all workflows can be completed within a single creative canvas — no switching platforms.
- Long-Task Execution: Through an Agent-based decomposition system, iMini AI can break down complex creative goals — such as “create a holiday campaign kit” — into sequential sub-tasks like main image → product page → video → platform adaptation, and automatically assign optimal models for each step.

Redefining Efficiency in the Global E-commerce Era

The iMini AI E-commerce Page is now live across both web and mobile platforms, providing sellers worldwide with a new level of content creation autonomy.

As the global market enters the age of efficiency-driven competition, iMini AI empowers merchants to shift from human-powered workflows to AI-driven production — accelerating digital transformation and setting a new benchmark for intelligent e-commerce creativity.

About iMini AI

iMini AI is a next-generation multi-modal creative platform integrating top global AI models for image, video, and text generation. With its one-stop intelligent production ecosystem, iMini AI aims to empower creators, brands, and businesses to scale visual storytelling effortlessly across industries.
