

# Herpes Virus Can Cause Migraine Headaches; The CBCD Reviews the Medical Evidence

*Research shows that the neurotropic herpes simplex virus (HSV) can cause migraine headaches. (1)*

ROCHESTER, NEW YORK, UNITED STATES OF AMERICA, May 2, 2016 /EINPresswire.com/ --

“Infected with the herpes simplex virus (HSV-1 or HSV-2)? The CBCD recommends taking [Gene-Eden-VIR](#) or [Novirin](#) against the latent virus.” – Greg Bennett, CBCD

There is evidence to suggest that the herpes simplex virus (HSV) may be a cause of migraine headaches. Dr. Adour and colleagues wrote that “many cranial nerve syndromes, such as migraine headache ... are caused by the neurotropic herpes simplex virus (HSV).” (1) According to Medical News Today, a migraine “is a severe, painful headache that can be preceded or accompanied by sensory warning signs such as flashes of light, blind spots, tingling in the arms and legs, nausea, vomiting, and increased sensitivity to light and sound.” (2) Additionally, FastMed.com notes that “If you feel that your migraines are frequently occurring at the same time as your herpes outbreaks, it may be that the herpes outbreak has triggered your migraines, as opposed to the migraines being a symptom in and of themselves.” (3)

The Center for the Biology of Chronic Disease (CBCD) recommends that individuals who suspect that their migraine headaches may be caused by the herpes virus, take Gene-Eden-VIR or Novirin against the latent HSV. The formula of these natural, antiviral products was shown to reduce HSV symptoms in two separate post-marketing clinical studies that followed FDA guidelines. Additionally, it was designed to help the immune system target the latent form of the virus.

The formula of Gene-Eden-VIR and Novirin was tested by Hanan Polansky and Edan Itzkovitz from the CBCD. The studies showed that the Gene-Eden-VIR and Novirin formula is effective against the family of herpes viruses, including HSV-1. The clinical studies were published in the peer reviewed, medical journal Pharmacology & Pharmacy, the first, in a special edition on Advances in Antiviral Drugs. Study authors wrote that, "individuals infected with (HSV-1 or HSV-2)...reported a safe decrease in their symptoms following treatment with Gene-Eden-VIR." (4) The study authors also wrote that, "We observed a statistically significant decrease in the severity, duration, and frequency of symptoms." (4)

Both products can be ordered online on the Gene-Eden-VIR and Novirin websites, here:

<http://www.gene-eden-vir.com>

and

<http://www.novirin.com>

Gene-Eden-VIR and Novirin are natural antiviral dietary supplements. Their formula contains five natural ingredients: Selenium, Camellia Sinensis Extract, Quercetin, Cinnamomum Extract, and Licorice Extract. The first ingredient is a trace element, and the other four are plant extracts. Each ingredient and its dose was chosen through a scientific approach. Scientists at polyDNA, the company that invented and patented the formula, scanned thousands of scientific and medical papers published in various medical and scientific journals, and identified the safest and most effective natural ingredients against latent viruses. To date, Gene-Eden-VIR and Novirin are the only natural antiviral products on the market with published clinical studies that support their claims.

Note: Novirin shares the same formula as Gene-Eden-VIR. The difference between the two is that Novirin has higher quality and more expensive ingredients.

What treatments are available for migraine headaches?

According to the Mayo Clinic, there are two primary ways of treating migraines. These include:

"Pain-relieving medications: Also known as acute or abortive treatment, these types of drugs are taken during migraine attacks and are designed to stop symptoms that have already begun.

Preventive medications. These types of drugs are taken regularly, often on a daily basis, to reduce the severity or frequency of migraines." (5)

What treatments are available for herpes infections?

"Two types of antiviral treatments against HSV are available: topical and oral. The treatments include penciclovir, acyclovir, famciclovir, and valaciclovir. However, their effectiveness is limited. For instance, a meta-analysis of five placebo-controlled and two dose comparison studies evaluated the effect of aciclovir, famciclovir or valaciclovir on symptoms. The meta-analysis showed that oral antiviral therapy decreases the duration and the associated pain of an outbreak by merely one day." (4) There are also the natural supplements Novirin and Gene-Eden-VIR, which have a formula that was designed to help the immune system target the herpes virus when it is in a latent form.

The CBCD reminds the public that Gene-Eden-VIR and Novirin are not a cure. However, two clinical studies, published in peer reviewed medical journals showed that their formula decreases symptoms in infected individuals. Specifically, the formula of Gene-Eden-VIR and Novirin was shown to safely

and effectively reduce herpes symptoms. Additionally, it was designed to help the immune system target the latent virus.

"We recommend that individuals who are infected with a latent herpes virus, take Gene-Eden-VIR or Novirin." – Greg Bennett, CBCD
