

# Drachmae Project disrupts the telecommunication sector with Blockchain for Mobile Telecommunications

*The Drachmae Project was established in 2015 to support Global Travellers. One issue which still concerns every traveller is the high cost of roaming charges,*

LONDON, LONDON, UNITED KINGDOM, August 19, 2016 /EINPresswire.com/ -- Particularly outside of Europe, and the difficulty of staying in touch with loved ones, business contacts and friends. Drachmae will launch a new service as part of its Travel Club Membership called The Personal Telephone Exchange (iPTX) and is expected to be received well by the consumer and SME markets. Video Intro

Lee Gibson Grant says:

The opportunity to disrupt the mobile communication sector with its excessive roaming fees has been long anticipated. This shows a simple and easy passage to implement use cases via the DT-Chain Permission based Network in an indirect (off-chain) way, and explores the first of several opportunities to disrupt the telecommunication sector. iPTX introduces a B2C and B2B product into the market that will result in revenues for the [Drachmae Project](#) to finance further use cases.

[Drachmae Mobile Communication](#) using the blockchain provides the potential to reduce Drachmae use case costs by up to 80,000\$ based on previous trials done in 2015 testing Global Roaming Networks and secured communications.

Drachmae also offers a business model for re-sellers which ultimately expands the DT Chain Network and opens new doors for the Drachmae Project in the future.

Drachmae Mobile Communication can save a user up to 75%, or more in some cases, on mobile data costs when roaming internationally. It uses the latest sim technology with a roadmap to include private keys and transactions for both digital and fiat currencies alike via the simcard,

One of the largest benefits is that when users purchase services, they will be rewarded in digital currency through the [loyalty and rewards scheme](#), in a decentralized manner, enabling users to trade or spend the currency alike. This provide a bridge into the digital currency and blockchain sphere for users who may not have explored it otherwise.
