[Network Security Appliance Market 2017](#)

Network security appliances comprise hardware used to monitor, detect, and prevent unauthorized access, misuse, or malfunction, or to disable/destroy a computer network. It aims to provide and maintain a secure platform that will help users perform critical tasks. Network security has been gaining prominence over the years, especially with the growing number of hacking activities as these sophisticated and complex threats cannot be addressed by traditional defense mechanisms. Organizations, both large and small, have started to invest in network security to proactively manage risks beyond their capability. These appliances can also increase workforce productivity and reduce costs, thereby offering organizations a significant competitive advantage. Network security appliances have capabilities that include UTM, VPN/firewall, IDP, web security, and routing.

The analysts forecast the global network security appliance market to grow at a CAGR of 11.08% over the period 2015-2019.
