WiseGuyReports.com Presents "Global Sleeve Gastrectomy Devices Market 2017-2021" New Document to its Studies Database

About Sleeve Gastrectomy Devices

Sleeve gastrectomy is the surgical weight loss procedure, in which about 15% of the stomach size is reduced resulting in low appetite for patients.

Based on product, the market is segmented into tissue closure devices, and dissection and positioning devices. The global sleeve gastrectomy devices market is expected to grow at a high growth rate during the forecast period due to the rising awareness about obesity treatments and advances in MI procedures and their efficacy. However, complications associated with the procedure, lack of reimbursement, and the inclination of medical professionals toward other bariatric surgical procedures hinder the market growth. Obesity is a growing concern, which is increasing the demand for surgical weight loss procedures. Laparoscopic bariatric surgery has a growing demand in the market, owing to minimal incision, medical tourism, and less cost burden on patients in emerging economies.

Technavio's analysts forecast the global sleeve gastrectomy devices market to grow at a CAGR of 13.53% during the period 2017-2021 .
