PUNE, INDIA, April 5, 2018 /EINPresswire.com/ --

Global Non-invasive Prenatal Testing Market

WiseGuyRerports.com Presents “Global Non-invasive Prenatal Testing Market 2017-2021” New Document to its Studies Database. The Report Contain 86 Pages With Detailed Analysis.

Description

Non-invasive prenatal screening is performed primarily by ultrasonography and serum testing from maternal plasma. Ultrasonography uses the clear tissue behind the infant's neck to detect genetic defects. A fetus with abnormalities tends to accumulate more fluid. Hence, more clear space is detected behind the neck, which is an indicative measure. Maternal serum screening is a method that involves blood testing in the first and second trimester of the gestation period where specific chemicals such as pregnancy-associated plasma protein A (PAPP-A) and free beta human chorionic gonadotropin (HCG) are checked.

The analysts forecast the global non-invasive prenatal testing market to grow at a CAGR of 16.86% during the period 2017-2021.
