Description:

OCTG is a set of equipment used in the drilling and extraction of on-shore and off-shore oil and gas. OCTG consists of drilling pipes, casing pipes, tubing pipes, and other line pipes used in the production and transportation of oil from wells to refineries. Casing pipes are placed at a wellhead to extract oil during the drilling process. Tubing pipes are inserted in the well after the completion of the drilling process and are used to transport oil and gas from wellbore to the surface. The diameter of a wellbore pipe decreases as it reaches the oil beds.

Oil Country Tubular Goods (OCTG) comprises of a wide range of steel tubular products that are used in Oil and Gas exploration and production and in particular drilling. They can be Seamless and Welded Pipes (Electric Resistance Welding (EWR) and come in various sizes and length. The process of manufacturing of seamless and welded pipes and tubes is different with the seamless pipes designed to bear much higher stress. OCTG generally includes three categories of products - drill pipe, casing, and tubing.
