This report focuses on the global Digital Farming status, future forecast, growth opportunity, key market and key players. The study objectives are to present the Digital Farming development in United States, Europe and China.

The agricultural community has spent several years synthesizing an operational description for digital farming. In several cases, there have also been solutions put forth all claiming to be digital farming, but now, more than ever, there is as much ambiguity about digital farming as there was when the community labeled and named it. Agriculture is one of the most complex systems that can be analyzed, and most of what has been proposed are solutions like weather, imagery, and NDVI, including many proprietary point solutions. These are pieces of the solution, and they are parts of the operational concept.
