called Ecoplexus. This energy deal will generate 101.9 megawatts of solar energy from the company's Distributed Generation assets in California and the Community Solar Garden located in Minnesota. The assets will be supplying 142 million kilowatt-hours of solar energy to meet the demands of schools, universities, hospitals, municipalities, and California residents in a long-term contract. The chief of the utilities under Harrison Street, Carolyn Arida,

explained that Ecoplexus is a world-renowned developer and renewable energy supplier and they are happy to work with their assets. This contract will provide sufficient solar energy to run about 12900 households and the public institutions like hospitals, schools, and government amenities.

Arida pointed out that Harrison Street partners with companies offering crucial services to the US citizens and are ready to work with Ecoplexus to reduce emissions in California that result from utilizing conventional energy sources like coal-fired power plants. Harrison Street hopes that these projects can steer California and Minnesota markets to take up renewable energy and abandon greenhouse gas emissions generators. The chief executive of Ecoplexus, John Gorman, expressed their joy in dealing with Harrison Streets for renewable energy. The executive termed Harrison Street a leading investor in renewable energy and the proponent of developing renewable energy infrastructure. The deal has proceeded smoothly, and the two stakeholders in the transition to clean energy are looking forward to more ventures that will establish this relationship.
