Disaster Recovery As A Service (DRaaS)
Global Market Report 2021: COVID-19
Growth And Change To 2030*

LONDON, GREATER LONDON, UK, July
28, 2021 /EINPresswire.com/ --

According to the new market research
report 'Disaster Recovery As A Service
(DRaaS) Global Market Report 2021:

COVID-19 Growth And Change To 2030' published by The Business Research Company, the global [disaster recovery as a service market](#) is expected to grow from \$5.19 billion in 2020 to \$6.35 billion in 2021 at a compound annual growth rate (CAGR) of 22.4%. The growth is mainly due to the companies resuming their operations and adapting to the new normal while recovering from the COVID-19 impact, which had earlier led to restrictive containment measures involving social distancing, remote working, and the closure of commercial activities that resulted in operational challenges. The DRaaS market is expected to reach \$21.2 billion in 2025 at a CAGR of 35.2%. The rise in need for backing up public and private data drives the growth of the disaster recovery as a service market.

The disaster recovery as a service market consists of sales of cloud based disaster recovery as a services for protecting applications and data from the disruption caused due to disaster. DRaaS helps in business continuity in any event of system failure. Some features of these solutions are hybrid cloud availability monitoring, cross-cloud infrastructure management, and cross-platform health monitoring.

Trends In The Global Disaster Recovery As A Service (DRaaS) Market

Due to rise in the number of cyber threats, companies started using AI and Machine Learning in DRaaS solutions to detect threats and unusual behavior in advance. There are predictive learning algorithms that are being developed to differentiate between real and false disaster recovery

situations. These learning algorithms can automatically perform proactive recoveries, eliminating outages before they are detected. For example, Unitrends, an US-based company offers a variety of business continuity and backup services. The company has developed the use of artificial intelligence (AI) in its services which runs during every backup in order to identify backups that are affected by ransomware. Once data threats are identified, the company with the help of AI and new technologies immediately informs about the same making data more secure.
