GIS technology is increasingly being used by mining companies to monitor critical factors such as sustainability, geological composition and compliance. GIS systems capture, record, evaluate and present spatial or geographic data. GIS integrates exploration datasets such as geophysical images, geochemistry, geologic maps, radiometric surveys, boreholes, and mineral deposits leading to efficient discovery of new mineral deposits. This technology also provides 3D visualization tools as it integrates data from various data sources. They are also used in allied industries such as production, mine closure and reclamation.
