The laminated glass market consists of sales of laminated glass by entities (organizations, partnerships, and sole proprietors) that are manufactured by adhering two or more layers of glass together with a flexible interlayer. Laminated glass is obtained by combining two or more sheets of float/tempered glass with one or more interlayers and is processed by autoclaving at 1400°C and pressure up to 14 bars. Polyvinyl butyral (PVB) is the most common interlayer used in laminated glass and makes it stronger, tensile safe for further use in various industries such as construction and building, automotive, electronics, and solar panels.
