

## REsurety unveils renewable energy toolkit for portfolio management

Clean energy buyers and investors utilize the best-in-class SaaS to forecast, audit and explain financial and environmental outcomes of projects and contracts

BOSTON, MASSACHUSETTS, USA, June 28, 2022 /EINPresswire.com/ --

REsurety, Inc., the leading analytics company empowering the clean energy economy, today announced a new SaaS analytics toolkit, REview. It's the latest addition to the company's software suite, which harnesses massive project performance and high resolution weather datasets to

Full visibility into project performance - both financial and environmental - and high confidence in the value and risk of future results is key for the long term success of this industry."

Lee Taylor, REsurety CEO

give clean energy buyers and investors a unique view into the financial and carbon emissions impact of the projects in their clean energy portfolios.

The new toolkit extends REsurety's existing marketing intelligence SaaS product capabilities by providing insight into customer-specific projects and contracts. REview customers can use the tool to analyze how their specific contracts are performing, what risks they hold, and how settlement is expected to occur over the coming months and years. The tool provides a breakdown of drivers of

financial, operational, and carbon emissions performance, both at the hourly and aggregate level.

"We are pleased to incorporate REsurety's dynamic new tool in service of our commitment to innovative client solutions," said Rich Santoroski, Chief Risk Officer and Co-Head of Portfolio Management for Hannon Armstrong, and a Board member of REsurety. "Like their entire set of software applications, REview offers superior data with actionable insights to evaluate new renewable energy investments and monitor asset performance."

REview delivers several unique benefits to customers: data speed and transparency, locational marginal emissions (LME) integration, and fundamentals-driven, scenario-based forecasting. REview provides high accuracy estimates of project and contract performance long before project data is typically provided; an independent and granular view of settlement and

operational performance; and it's the only tool on the market that measures both project-specific carbon emissions performance alongside project-specific financial performance.

"REsurety is excited to empower sustainability leaders with the insight and confidence they need to continue accelerating their investments in the clean energy-fueled future," said REsurety CEO Lee Taylor. "Full visibility into project performance - both financial and environmental - and high confidence in the value and risk of future results is key for the long term success of this industry."

REview helps customers understand settlement impacts potentially caused by a project's operations by comparing modeled settlement to actual settlement.

For years, REsurety has used its proprietary data and analytics to accurately model the project output, carbon emissions impact, and financial value of clean energy generation. The new subscription service leverages these models and makes the insights they enable accessible to corporate buyers or investors through just a few clicks.

Information about REview and its applications can be found here.

REview is currently in private launch with leaders in clean energy procurement, investment, and trading. General availability beyond the private launch is expected later this fall.

Companies may request an online demo of REview from an expert on the REsurety team by contacting review@resurety.com. Members of the news media may arrange for a demo by contacting Allison Lenthall, allison@renewcomm.com, 202-322-8285.
