Key Trends In The Textile and Fabric Finishing and Fabric Coating Mills Market

With concerns over the high consumption of water, air pollution, and waste generation, the textile industry is steering towards more environmentally sustainable methods of fabric coating. Manufacturers are figuring out more water efficient ways to dye the fabrics, which is the most water consuming stage of the fabric manufacturing process. Technologies such as aerated dyeing involves placing fabric in a super fluidic CO2 pressurized chamber with dye which reduces water and chemicals usage. This process saves up to 50% of energy and dye consumption, time, and more than 1000 liters of water per day. The process also saves costs by 40-60% per day for the coating companies.
