Respiratory heaters are external heaters used with a nebulizer system.

BURLINGAME, CALIFORNIA, UNITED STATES, December 29, 2022

/EINPresswire.com/ -- External

warmers called respiratory heaters are utilised with nebulizer systems. A nebulizer is a tool for administering medication that enables direct drug inhalation into the lungs. Through nasal cannulae and tracheal tubes, respiratory heaters deliver heated breathing gas and heated aerosol to individuals who need respiratory support. Users of respiratory heaters can benefit from a mixture of warm ambient air and oxygen.

High flow treatment is a sort of respiratory support technique that uses nasal cannulae to deliver a high flow of medicinal gas. The respiratory heater heats both the diluted air and the solution in the nebulizer. Patients who require high flow therapy use respiratory warmers. These are employed in the treatment of bronchitis, asthma, and chronic obstructive pulmonary disease.
