USA Vein Clinics’ Florida locations have the advanced capabilities that allow the team of vein specialists to offer non-surgical treatments for varicose veins, spider veins, leg swelling, leg pain and venous ulcers. Treatment, based on the individual needs of the patient, can include the Clarivein<sup>®</sup> or Venaseal<sup>™</sup> procedures, which treat the underlying cause of vein disease and prevent reoccurrence without laser energy. Other non-invasive treatment options include endovenous laser treatment (EVLT), ultrasound-guided sclerotherapy (USGS), visual sclerotherapy, varithena and radiofrequency ablation.

Varicose and spider veins can cause uncomfortable symptoms such leg cramping, weariness, achiness, and edema. Vein symptoms often worsen over time and eventually affect one’s quality of life. Vein illness can lead to other painful and uncomfortable medical conditions like deep vein thrombosis (DVT) and venous ulcers.
