Knee replacement devices are medical implants that are used to replace a damaged or worn-out knee joint. Knee replacement surgery is a common procedure for people who suffer from arthritis, osteoarthritis, or other conditions that cause significant pain and limited mobility in the knee.

There are several types of knee replacement devices available, including total knee replacement (TKR) and partial knee replacement (PKR) devices. TKR devices involve replacing the entire knee joint with an artificial joint made of metal and plastic, while PKR devices are used to replace only the damaged portion of the knee joint. Knee replacement devices typically consist of several components, including a femoral component, tibial component, and patellar component.
