Syphilis is a sexually transmitted disease caused by the bacteria *Treponema pallidum*. Syphilis tests are used to diagnose and detect antibodies against the bacteria in a patient's blood. There are various complications associated with syphilis such as infertility in men and women, ectopic pregnancy, cervical cancer in women, and mortality from disease. Treponemal tests used to diagnose bacterial infections include *Treponema pallidum* particle agglutination (TP-PA) and fluorescent treponemal antibody (FTA-ABS). Non-treponemal tests are easy to perform and interpret, provide quick results, and are inexpensive.

The syphilis testing market is expected to witness a steady growth in the future. The market has drawn the interest of the healthcare industry, owing to increase in prevalence of sexually transmitted disease. The incidence, prevalence and management or the prevention, treatment, and control of further transmission of the syphilis disease prove to be a drag on both, national health budgets and household income. Hence, prevention and control of transmission of syphilis is imperative and of utmost priority across all nations. Such control and prevention of transmission of sexually transmitted diseases is possible by the early diagnostic testing.
