Unified endpoint management (UEM) is an architecture and approach that control different

types of devices, including computers, smartphones, and IoT devices, from a centralized command point. Unified endpoint management securely manages all endpoints in an organization using a comprehensive solution. These tools help organizations manage a growing range of end-users and internet of things requirements. They must maintain visibility and control across their endpoint environments from a unified platform. These encompass management, security, and identity across mobile devices and laptops, including (but not limited to) mobile phones, tablets, wearables, and IoT devices.
