Blueclone Launches Secure Cloud AI-as-a-Service for SMB Managed IT in NYC and Across the U.S

PRINCETON, NJ, UNITED STATES, June 16, 2025 /EINPresswire.com/ -- Blueclone Networks, a leading IT and cybersecurity firm headquartered in Princeton, New Jersey, has officially launched its new Secure Cloud AI as a Service (add new page service URL) offering—setting a new standard for privacy-first, compliance-ready AI solutions designed specifically for small and mid-sized businesses (SMBs) across NYC, New Jersey, and Eastern Pennsylvania as part of their Managed IT Services offer.

This release marks one of the first secure AI deployments of its kind in New Jersey, combining enterprise-grade cloud computing artificial intelligence tools with strict security frameworks and localized support from certified AI consultants.

Unlike consumer-grade tools such as ChatGPT or Google Bard, which may store user inputs or train on sensitive business data, Blueclone's cloud computing artificial intelligence solution is built on a zero-retention model. It is hosted on a private, secure cloud platform, enabling integrated access to leading models such as Microsoft AI services, Mistral, Anthropic, and others.

"We designed this service to meet the real needs of business owners and internal IT leads—privacy, compliance, and reliability," said Milan Baria, CEO of Blueclone Networks (https://www.blueclone.com/about-milan-baria-ceo-of-blueclone-networks-trusted-leader-in-cybersecurity-managed-it-services-new-jersey/).
"Public AI tools were not built for regulated industries or teams handling sensitive client data. Our platform provides a secure foundation for businesses to benefit from AI while maintaining control over their information and operations."

Strategic AI for Business – Built for NYC and Beyond

This new offering is the latest in Blueclone's expanding suite of services that integrate AI capabilities with its existing managed IT services and cybersecurity services. Core features of secure AI as a service include:

-Secure, compliant AI chat interfaces for internal or external use

-Fully programmable AI phone agents with 24/7 availability

-No-code AI app builder to create custom internal or customer-facing tools

-Support for regulatory frameworks, including HIPAA, SOC 2, and GDPR

-Real-time document summarization, finance dashboards, and automation modules

Designed to support industries including healthcare, finance, legal, and manufacturing, Blueclone's AI tools can be deployed in hours, not weeks, and are co-managed by expert consultants who tailor each rollout based on operational and compliance needs.

Why NYC Businesses Are Turning to Blueclone

Organizations across the greater New York region are facing mounting pressure to innovate without compromising compliance. Blueclone's AI consulting services are uniquely positioned to address this challenge—offering a complete delivery model that includes readiness assessments, application development, staff enablement, and optimization.

This service is already being used by clients to automate onboarding workflows, improve customer service responsiveness, and enhance decision-making with secure data analytics—all while maintaining strict data governance controls.

A Trusted IT & AI Partner for Regulated Industries

For over 20 years, Blueclone has delivered secure, fully managed IT services (https://www.blueclone.com/managed-it-services-nj/) and cybersecurity solutions to businesses throughout Central New Jersey and Eastern Pennsylvania. This foundation allows the company to seamlessly integrate advanced AI models within existing IT environments—offering a level of service and accountability that traditional AI consulting companies or resellers cannot match.

Now Accepting AI Consultations

Business owners and IT leaders interested in deploying AI within a secure, compliance-ready framework are encouraged to schedule a free AI consultation with Blueclone's team of certified consultants.

About Blueclone Networks

Blueclone Networks is a trusted provider of secure IT services, cybersecurity, and AI development services for regulated industries and growing businesses.
