The escalating prevalence of cancer is predicted to be a major driving force propelling the growth

of the alkylating agent's market. Cancer describes the uncontrolled growth and spread of abnormal cells in the body that may invade or destroy healthy tissues, capable of developing in almost any organ or tissue and may spread to other body parts through the blood and lymph systems. The incidence of cancer is predominantly in aging populations, as the risk of cancer ascension rises significantly with age. Old age increases individuals' exposure to risk factors and allows time for cells to accumulate genetic mutations.
