Food Intolerance Products Market Growth Forecast: What To Expect By 2025?

The market size for food intolerance products has seen a significant rise in the past few years.

The Business Research Company's Latest Report Explores Market Driver, Trends, Regional Insights - Market Sizing & Forecasts Through 2034"

*The Business Research  
Company*

Growth is anticipated to ascend from \$19.05 billion in 2024 to \$20.41 billion in 2025 at a compound annual growth rate (CAGR) of 7.2%. Factors influencing this upward trend have been linked to a heightened occurrence of food intolerances and sensitivities, increased cognizance and diagnostic procedures for food allergies and intolerances, surging demands for specialized and free-from food products, the necessity for personalized nutritional and dietetic resolutions, the widening of the health and wellness-conscious consumer demographic, as well as the presence of labeling and certification standards dedicated

to intolerance-friendly products.

The market size for food intolerance products is projected to experience robust growth in the ensuing years, expanding to \$27.09 billion in 2029 with a Compound Annual Growth Rate (CAGR) of 7.3%. This growth throughout the forecasted period can be credited to the increasing preference for plant-based and alternative protein sources, emphasis on clean label and minimal ingredient foods for intolerance diets, advancements in research and development for unique ingredient substitutes for food allergens, rising demand for intolerance-friendly products in the

foodservice and hospitality industry, proliferation of food intolerance products in global and emerging markets, and an increasing consumer inclination towards functional and gut health-focused foods. The forecast period will also see significant trends including innovation in ingredient substitutes, concentration on digestive health, nutritionally packed free-from products, low FODMAP products, and personalized nutrition solutions.

What Are Key Factors Driving [The Demand In The Global Food Intolerance Products Market?](#)

The burgeoning interest in veganism is fueling the expansion of the food intolerance products sector. A vegan regimen primarily includes plant-derived foods such as fruits, vegetables, soy, legumes, nuts, nut butter, dairy alternatives from plants, sprouted or fermented plant foods, and whole grains. This diet promotes better digestion and overall health, and because it contains necessary nutrients, it doesn't result in food intolerances. As veganism becomes more prominent, it accelerates the demand for products catering to food intolerances. For instance, in a blog posted by the US online education organization, the Food Revolution Network, in April 2022, sales of plant-based meat and dairy substitutes were predicted to reach \$162 billion by 2030. This indicates that nearly 8% of the global 'protein foods' market is already composed of these alternatives. Hence, the increasing allure of a vegan diet is expected to propel the growth of the food intolerance product industry.

Who Are The Leading Players In The Food Intolerance Products Market?

Major players in the Food Intolerance Products Global Market Report 2025 include:

- Nestle SA
- General Mills Inc.
- Kraft Heinz Company
- Dr. Schär AG/SPA
- Mead Johnson & Company LLC
- Danone SA
- Reckitt Benckiser Group plc
- Beyond Meat Inc.
- Blue Diamond Growers
- Abbott Laboratories

What Are Some Emerging Trends In The Food Intolerance Products Market?

One noticeable trend in the food intolerance products market is the increasing inclination towards strategic partnerships and collaborations. For the purpose of product development and supply enhancement, companies are teaming up with their counterparts more frequently. A case in point is A&B Ingredients, a US-based food ingredient manufacturing company. In September 2023, they launched CytoGUARD OX-WST, a natural antioxidant derived from natural tea extract focusing on protein powders like whey and yeast proteins. This antioxidant is critical in extending

shelf life and preserving the quality of protein-rich food items by effectively reducing hexanal levels, a primary indicator of lipid oxidation. This helps retain the nutritional value and sensory properties of proteins. As a clean-label ingredient, CytoGUARD OX-WST meets the escalating consumer demand for natural and eco-friendly food additives. It's a critical component for food manufacturers aiming to improve the integrity of their products while meeting safety and quality norms.

Analysis Of Major Segments Driving The Food Intolerance Products Market Growth  
The food intolerance products market covered in this report is segmented –

- 1) By Product Type: Diabetic Food, Gluten-free Food, Lactose-free Food
- 2) By Type: Bakery Products, Confectionery Products, Dairy and Dairy Alternatives, Meat and Seafood Products, Other Types
- 3) By Distribution Channel: Hyper markets Or Super markets, Convenience Stores, Online Channels, Other Distribution Channels

Subsegments:

- 1) By Diabetic Food: Sugar-Free Snacks, Low Glycemic Index Foods, Sugar Substitutes
- 2) By Gluten-Free Food: Gluten-Free Breads And Baked Goods, Gluten-Free Pasta And Grains, Gluten-Free Snacks
- 3) By Lactose-Free Food: Lactose-Free Milk And Dairy Products, Lactose-Free Ice Cream And Yogurt, Lactose-Free Cheese
