MyBTCX.com has officially launched support for Pix, Brazil's real-time payment network developed by the Central Bank of Brazil. With Pix, users in Brazil can access a global exchange that's built to be fast, safe, and simple. When buying Bitcoin (BTC), Ethereum (ETH), or popular altcoins like Tether (USDT), Binance Coin (BNB), USD Coin (USDC), XRP, Solana (SOL), and Dogecoin (DOGE), MyBTCX.com ensures a seamless path from Brazilian Reais (BRL) to the digital assets shaping the future.

What's Pix?

Pix is more than just a payment method — it's a national innovation. Launched in 2020 by the Central Bank of Brazil, Pix revolutionized the way Brazilians move money. With transactions that clear in seconds, 24/7 availability (including weekends and holidays), and low-to-zero fees, Pix has become the preferred payment choice for over 150 million Brazilians.

Unlike private fintech apps, Pix is a public payment infrastructure designed to modernize and democratize financial services across the country. It eliminates the headaches of long bank numbers, replacing them with simple, scannable QR codes or unique Pix keys. For crypto investors, this means funding accounts is not only faster but also safer and more reliable than older transfer methods.

Why Brazilians & Beyond Use Pix to Buy Crypto

Pix combines all the things that matter most to crypto traders:

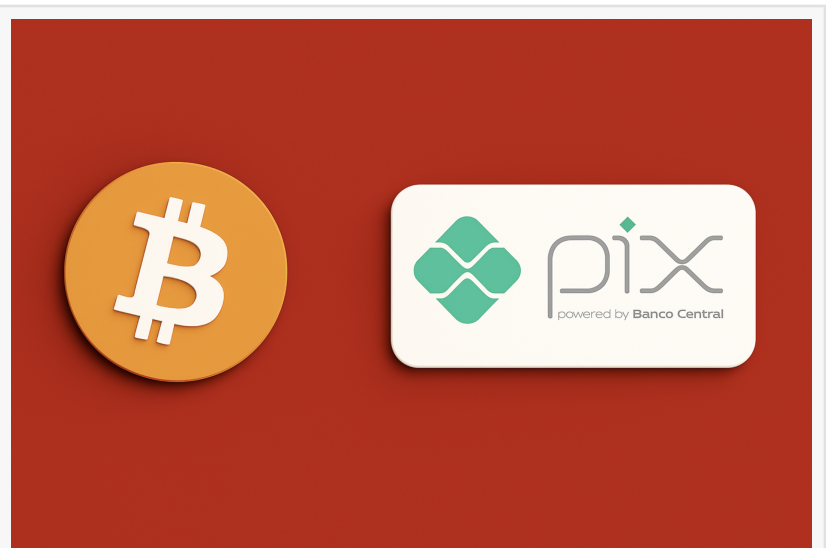

- Speed: Funds arrive in seconds, so clients never miss a trading opportunity.
- Availability: Works anytime, even on holidays and weekends.
- Low Cost: Minimal or no fees from banks.
- Security: Pix is encrypted and verified by Brazil's central banking authority.

These features make Pix the perfect match for crypto, where timing, trust, and transaction efficiency are everything.
