

# Pharmacy Chains Assess XRP-Based, Open-Source Payment Infrastructure as Cost Pressures Rise

*XRP-Powered Healthcare Payments Gain Attention as Alternatives to Legacy Pharmacy Payment Systems*

DUBAI, UNITED ARAB EMIRATES,  
December 27, 2025 /

EINPresswire.com/ -- XRP-Powered Healthcare Payments Gain Attention as Alternatives to Legacy Pharmacy Payment Systems

XRP Healthcare LLC today issued an industry update highlighting how pharmacy chains and healthcare operators are increasingly assessing XRP-based healthcare payment infrastructure as a cost-efficient alternative to traditional pharmacy payment systems.

The update reflects growing scrutiny across healthcare markets as pharmacy operators seek faster settlement, lower transaction costs, and improved interoperability amid rising payment processing expenses and operational complexity.

## Pharmacy Payment Systems Under Review

Pharmacy chains operate high-frequency transaction environments with narrow margins. Many existing pharmacy payment systems rely on closed, proprietary infrastructure that can result in elevated processing fees, delayed settlement and reconciliation, limited integration flexibility with pharmacy point-of-sale and accounting systems, and long-term vendor dependency.

As digital healthcare adoption accelerates, pharmacy operators are reassessing payment architecture as a strategic operational consideration rather than a back-office function.

## XRP-Based Payment Infrastructure in Healthcare

Pharmacy Chains Assess XRP-Based, Open-Source Payment Infrastructure as Cost Pressures Rise

XRP Ledger-based payment rails are increasingly being evaluated within healthcare and pharmacy environments due to their ability to support near-instant settlement, predictable and low transaction costs, high throughput suitable for pharmacy-scale volumes, and cross-border, multi-currency payment capability.

These attributes have positioned XRP-powered healthcare payments as a practical infrastructure option for pharmacy chains seeking efficiency, scalability, and cost predictability.

## XRPL as Open Payment Infrastructure

The XRP Ledger (XRPL) was designed as an open, decentralised payment protocol intended to enable innovation across industries. Its architecture allows independent organisations and developers to build payment solutions that modernise legacy systems without reliance on centralised or proprietary control.

In healthcare and pharmacy payment environments, XRPL-based infrastructure enables faster, more cost-efficient settlement while supporting interoperability and system transparency. XRP Healthcare LLC's payment initiatives reflect the intended use of open ledger infrastructure to improve legacy healthcare and pharmacy payment workflows.

## Open-Source Payment Models for Pharmacies

Alongside settlement performance, pharmacy operators are increasingly assessing how payment systems are built and governed. Open-source healthcare payment infrastructure provides transparent system architecture, greater interoperability with existing pharmacy systems, reduced vendor lock-in, independent auditability, and long-term adaptability.

These characteristics contrast with closed payment systems that can restrict flexibility as pharmacy networks expand across regions and regulatory frameworks.

## [XRPH Wallet](#) Overview

As part of its open infrastructure strategy, XRP Healthcare LLC has developed the XRPH Wallet, an open-source, non-custodial payment utility designed to support XRP-based pharmacy and healthcare payments.

The XRPH Wallet enables XRP-powered transactions, QR-based payments and invoicing, optional accounting and reconciliation exports, non-custodial fund control, and operation without storing or transmitting patient health information. The wallet is structured strictly as a payment utility, allowing healthcare operators to integrate XRP payment functionality without reliance on closed platforms.

## Industry Adoption Trends

Evaluation of XRP healthcare payment infrastructure reflects a broader shift toward cost-efficient, interoperable pharmacy payment models. Wallet-based payment rails are increasingly considered as complementary infrastructure alongside traditional payment methods, providing pharmacies with optionality and resilience as digital payment adoption continues to expand.

XRP Healthcare LLC continues to support education around open payment standards and interoperable healthcare payment infrastructure.

## About XRP Healthcare LLC

XRP Healthcare LLC is a healthcare technology company focused on developing XRP-powered payment infrastructure and open-source digital tools for pharmacies, clinics, and healthcare ecosystems. The company emphasizes transparency, interoperability, and cost-efficient healthcare payment models.

XRP Healthcare LLC operates independently from XRP Healthcare M&A Holding Inc., which is pursuing a separate public-market strategy.
